Data Model:

Insights Report (Textile - GMS s TMS)

1. **Buyer s Shipment Performance:** Only 34.17% of orders were shipped on time, indicating significant shipment delays that may impact buyer satisfaction and future order commitments.
2. **Order Readiness s Finishing:** Finishing Achievement stands at 96.54%, showing strong finishing department performance; however, delays suggest bottlenecks beyond finishing, such as packing or logistics.
3. **Machine Efficiency (Knitting):** Knitting Efficiency of 96.37% reflects excellent machine utilization and stable knitting operations throughout the year.

4. **Production Output Trend:** Knitting output totals 403K KG, with noticeable declines in the last quarter, signaling potential maintenance, demand fluctuation, or workforce issues.
5. **Fabric Quality Issues:** Dyeing Reprocessing Rate of 12.33% indicates moderate quality challenges in dyeing, increasing rework costs and production cycle time.
6. **Fabric Yield s Loss:** A Fabric Yield of 93.07% shows acceptable material utilization, but further reduction in dyeing reprocessing could improve yield performance.
7. **Fabric Inspection Results:** Fabric Inspection Pass Rate of 60.22% is relatively low, highlighting quality defects such as crease marks, needle lines, and uneven dyeing.
8. **Line Productivity (Cutting):** Cutting Achievement at 84.98% suggests cutting lines are underperforming compared to expected efficiency and require process or manpower optimization.
9. **Operational Risk:** The combination of low inspection pass rate and high late shipment percentage indicates a risk to delivery commitments, emphasizing the need for stronger quality control and production planning.
10. **Line Productivity:** Sewing efficiency averages 65.52% with noticeable monthly fluctuations, suggesting uneven line balancing and skill or style-related challenges.
